

Accomplishments Date

1984

Bose and John Carter's Headphoning patent explicitly addresses noise reduction, response consistency and comfort.

1986

Voyager Flight Real-World Testing

1989

First commercial application targeted specifically at pilots. Served as a high-demand testing ground before transitioning to consumer markets.

Accomplishments Date

1998

The Aviation Headset X allowing for a smaller, lighter headset that provides a level of noise reduction comparable to larger models.

1999

Bose partnered with American Airlines to supply noise-cancelling headphones to first- and business-class passengers, generating consumer awareness and trial.

Accomplishments Date

2000

2014

The Bose QuietComfort Acoustic Noise Cancelling Headphones (aka QC1) spawn an industry.

QC25 launched and refined the wired product

Design trade offs and manufacturing

01

Design choice 1

- Comfort and seal
- Makes sustained wear practical.

02

Design choice 2

- Small earcups
- Improves portability and wearability.

03

Design choice 3

- Replaceable battery
- Makes continued use possible away from a charger.

04

Design choice 4

- Wireless integration
- Removes the audio cable for everyday listening.
